

EXPERIMENT – 4

AIM

To develop a **Student Registration Form using JavaScript validation** to collect and validate student details before form submission.

DESCRIPTION

The experiment demonstrates the use of **HTML, CSS and JavaScript** to create and validate a student registration form. The application allows the user to enter student details such as name, email, mobile number, gender, branch and password. JavaScript is used to validate the entered information and display appropriate messages for invalid inputs.

DETAILS ABOUT PROGRAM

Folder structure:

FullStack/

└─ Week-4/

│─ background.jpg

│─ index.html

│─ login.css

│─ login.js

│─ logo.jpeg

│─ success.html

│─ success.css

└─ success.js

The program was executed in a **web browser** using index.html.

Execution steps:

1. Opened the Week-4 folder in VS Code.
2. Opened index.html in a web browser.
3. Entered the required login details.
4. JavaScript was used to validate the login inputs.
5. After successful validation, the success page was displayed.

OUTPUT

The **Login and Success Page** was successfully displayed and executed in the browser. The login details were validated using JavaScript, and the success page was displayed after successful login.
